# Presentation Overview

---

- ▶ Introduction
- ▶ Functional System Diagram
- ▶ Concept Descriptions
- ▶ Final AUV Design + Test Results
  - ▶ Complete System
  - ▶ Mechanical Subsystems
  - ▶ Electrical System
  - ▶ Guidance System
- ▶ Engineering Economics – Budget/Expenditures
- ▶ Concluding Remarks + Questions

# SSC Pacific TRANSDEC Anechoic Saltwater Pool

# Mission Tasks

Path (Follow to Navigate Through Course)

Strike Buoys

PVC Pass-Over

Gladiator Ring (Drop Markers in Bins)

Kill Caesar (Launch Torpedoes Through PVC Cutouts)

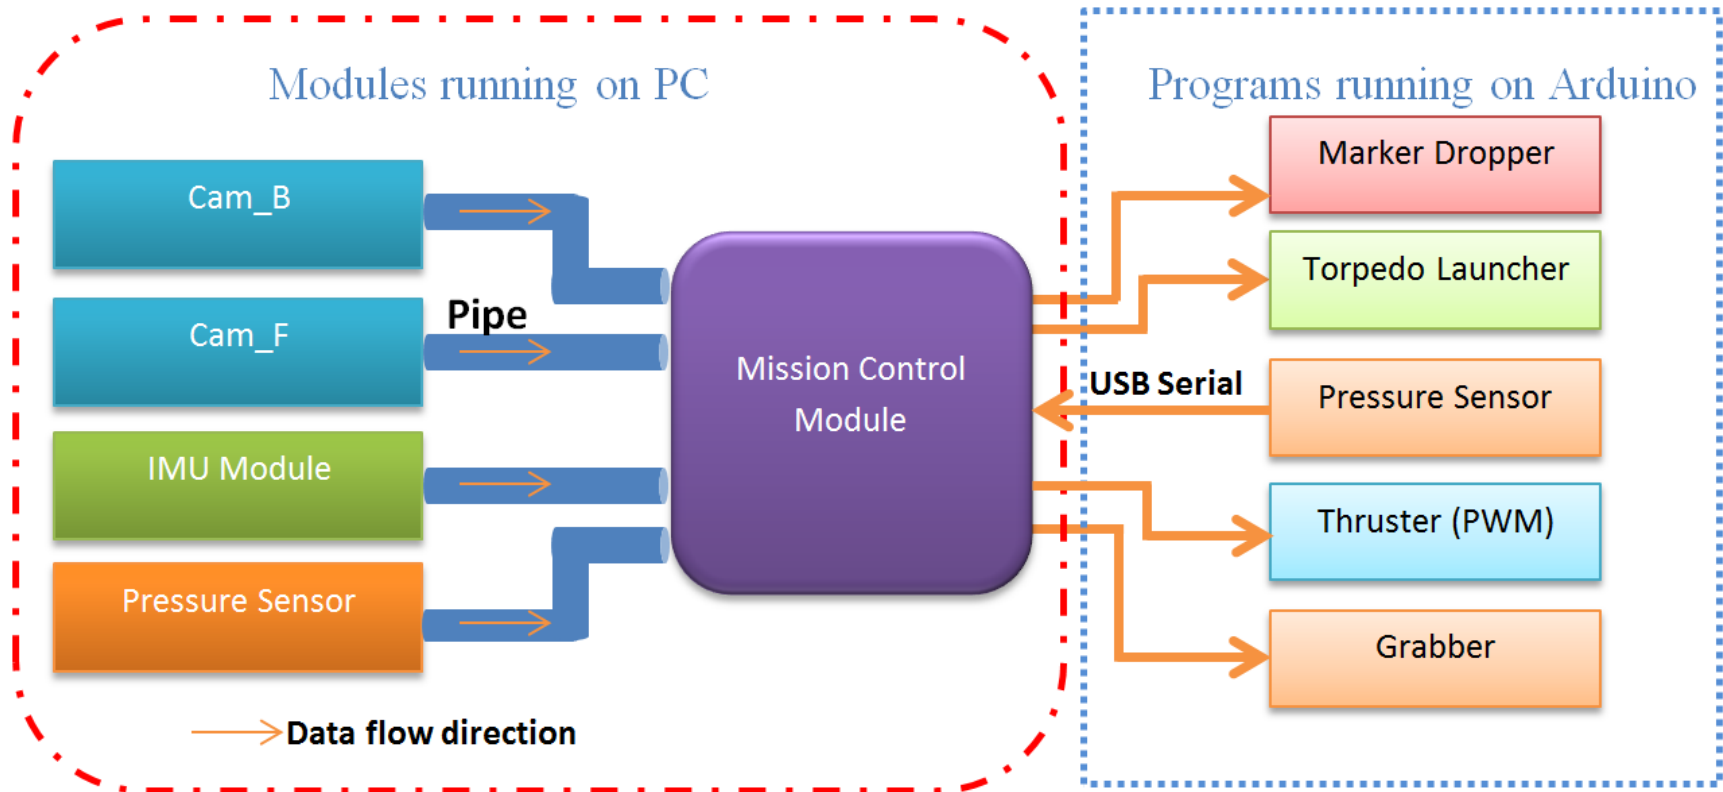

Laurel Wreath (Locate, Recover, Surface, and Release)

# Course Layout – Practice/Competition

# Functional Diagram

# Concept Descriptions

---

- ▶ Hull/Frame –
  - ▶ Solid Enclosure
  - ▶ Hydrodynamic/Biomimetic Shape (e.g. Sting Ray)
  - ▶ Open External Frame + Internal Enclosure
  
- ▶ Propulsion –
  - ▶ Pneumatics
  - ▶ Thrusters
    - ▶ Quantity
    - ▶ Locations
  
- ▶ Camera Enclosures –
  - ▶ Cylindrical + Optically Transparent
  - ▶ Spherical + Optically Transparent
  - ▶ Box (i.e. Flat-Faced) + Optically Transparent
    - ▶ Locations

# Concept Descriptions

---

- ▶ **Torpedo Launchers –**
  - ▶ Self-Propelled
  - ▶ Spring Actuated
  - ▶ **Pneumatically Actuated**
    - ▶ Regulated Compressed Air Tank
    - ▶ Solenoid Valves
    - ▶ Gas Lines + Adapters
  
- ▶ **Grasp/Release Mechanism –**
  - ▶ Grab vs. Scoop
  - ▶ Number of Claws/Jaws
  - ▶ **Pneumatically Actuated**
    - ▶ Regulated Compressed Air Tank
    - ▶ Solenoid Valves
    - ▶ Gas Lines + Adapters

# Final AUV Design

# Side View

# Top View

# Front View

# Photograph of Assembled AUV

---

# Tests

---

Test Description	Outcome
Vehicle Weight	Pass (87.7 lbs)
Vehicle Density	Pass (0.0360 lb/in <sup>3</sup> )
Vehicle Balance	Pass
Vehicle Dimensions	Pass (37" L x 27" W x 27" H)
Watertight Hull	Pass

# Interior Hull Layout (Revised)

# Camera Enclosures (Revised)

# Tests

Test Description	Outcome
Watertight Camera Enclosures	Pass
Computer Vision – Gate Detection	Pass
Computer Vision – Path Detection	Pass
Computer Vision – Buoy Detection	N/A
Computer Vision – Drop-In Bin Detection	N/A
Computer Vision – Torpedo PVC Cut-Out Detection	N/A

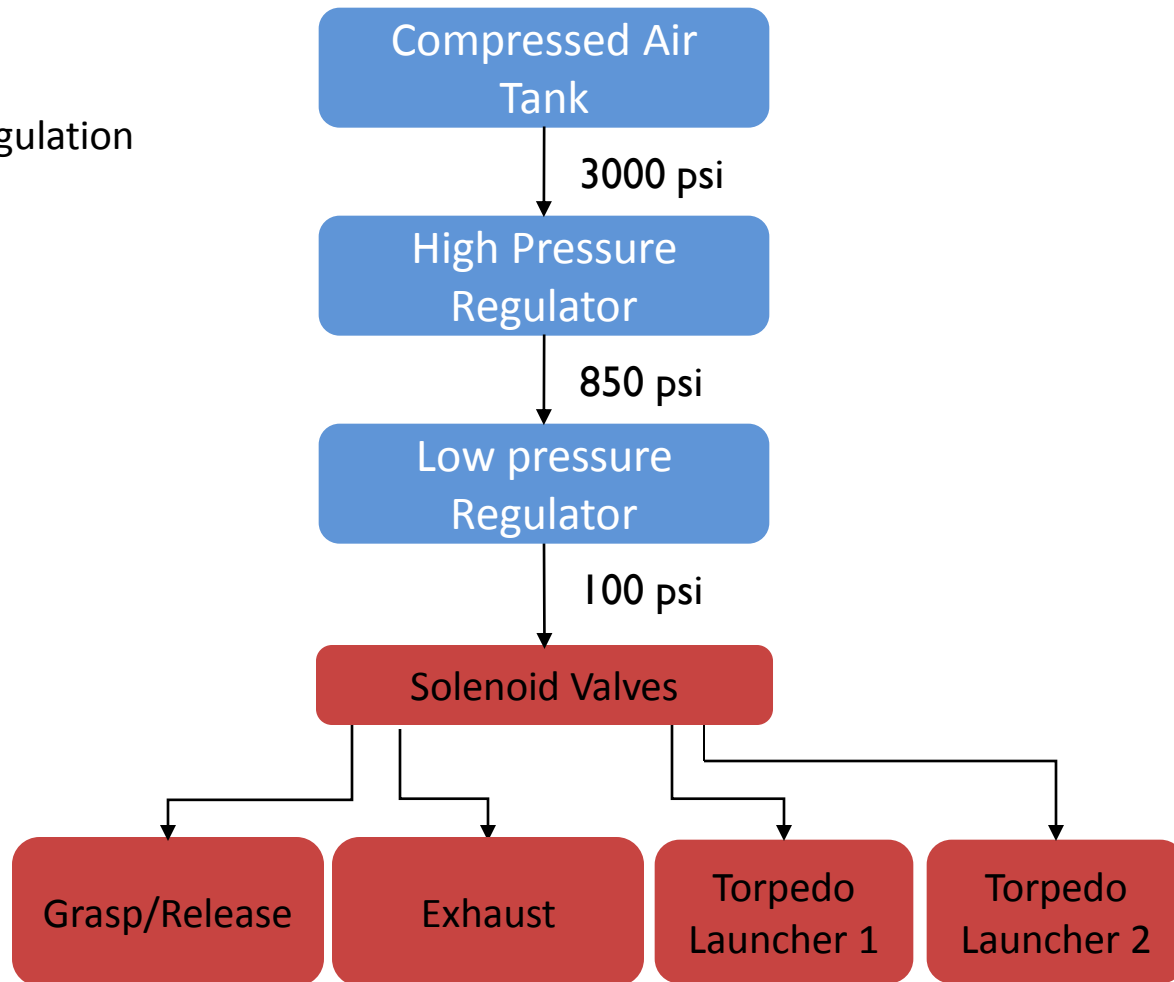

# Compressed Air Tank and Regulators

# Compressed Air Distribution System Diagram

- Storage/Regulation
- Distribution

# Tests

---

Test Description	Outcome
Proper Regulated Output Pressure	Pass (~100 psi)
Watertight Gas Lines (No Air Leakage)	Pass
Solenoid Valve Actuation/Integration	Pass
One-Way Check Valve Purging System	Pass

# Torpedo Launcher Design

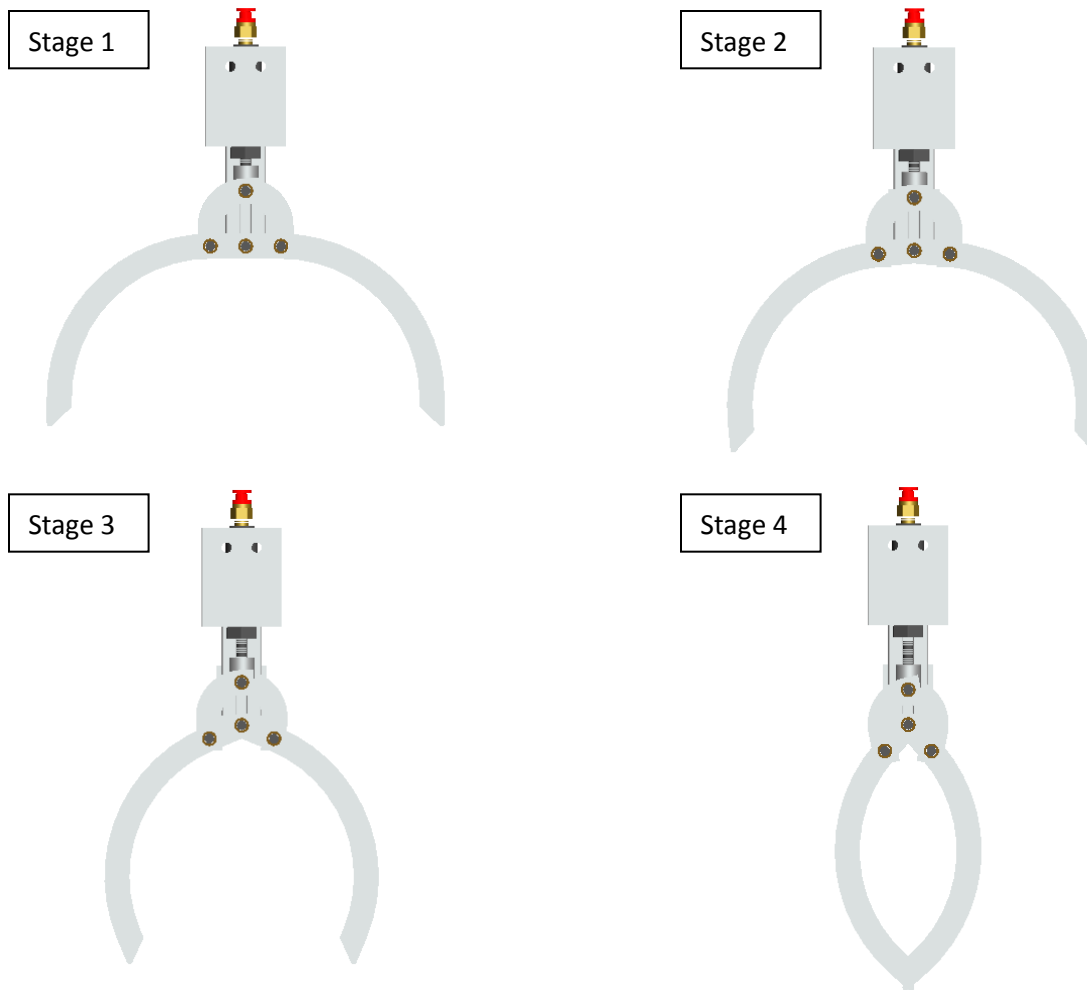

# Tests

---

Test Description	Outcome
Torpedo Density	Pass (0.037 lb/in <sup>3</sup> )
Torpedo Balance	Pass
Torpedo Hydrodynamics	Pass
Torpedo Dimensions	Pass (0.95" L x 0.95" W x 5.00" H)
Torpedo Launch – Air	Pass
Torpedo Launch – Water	Fail (Modification In Progress)

# Grasp/Release Mechanism Design

# Tests

---

Test Description	Outcome
Simulation (Pro/E Mechanism + Adams)	Pass
Grasp/Release Test – Air	Pass
Grasp/Release Test – Water	Pass

# Marker Dropper Design

# Tests

---

Test Description	Outcome
Servo Motor Actuation/Control (Using Dragon Board)	Pass
Marker Dropper Test – Air (Using Dragon Board)	Pass
Marker Dropper Test – Water	N/A

# Electrical System

# Voltage Regulator Boards

---

LM22677 For Zotac PC and  
Pressure Transducer  
(Input: 32V – Output: 19V)

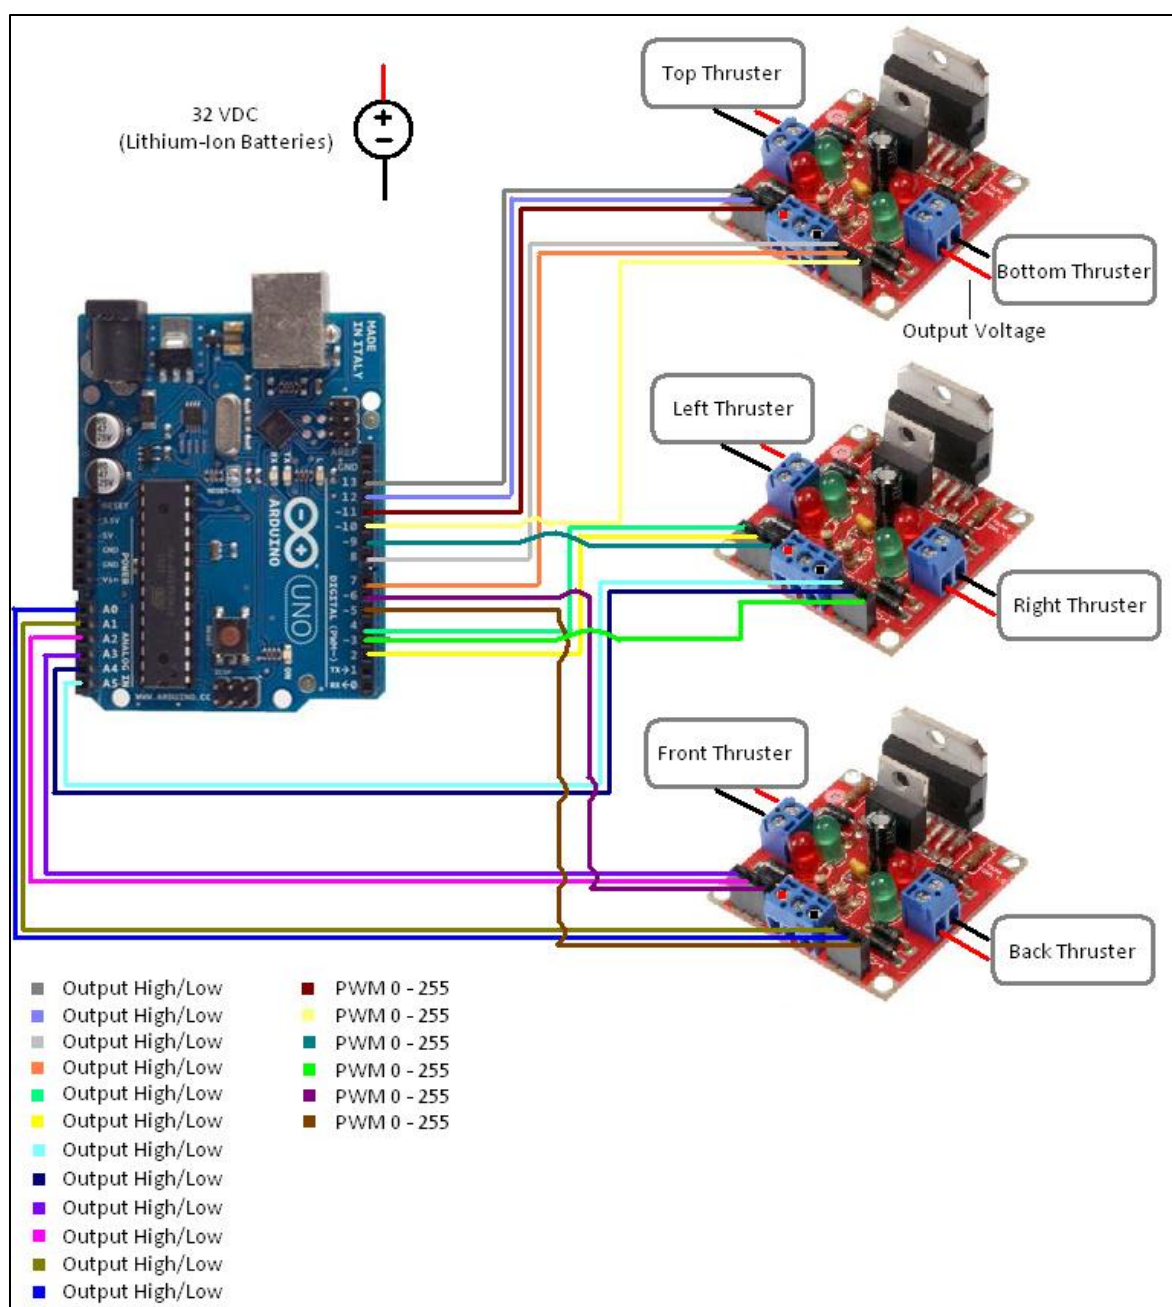

LM22676 For Arduino Uno  
Boards and Hydrophone  
Interface PCB  
(Input: 19V – Output: 9V)

Input  
Output

Input  
Output

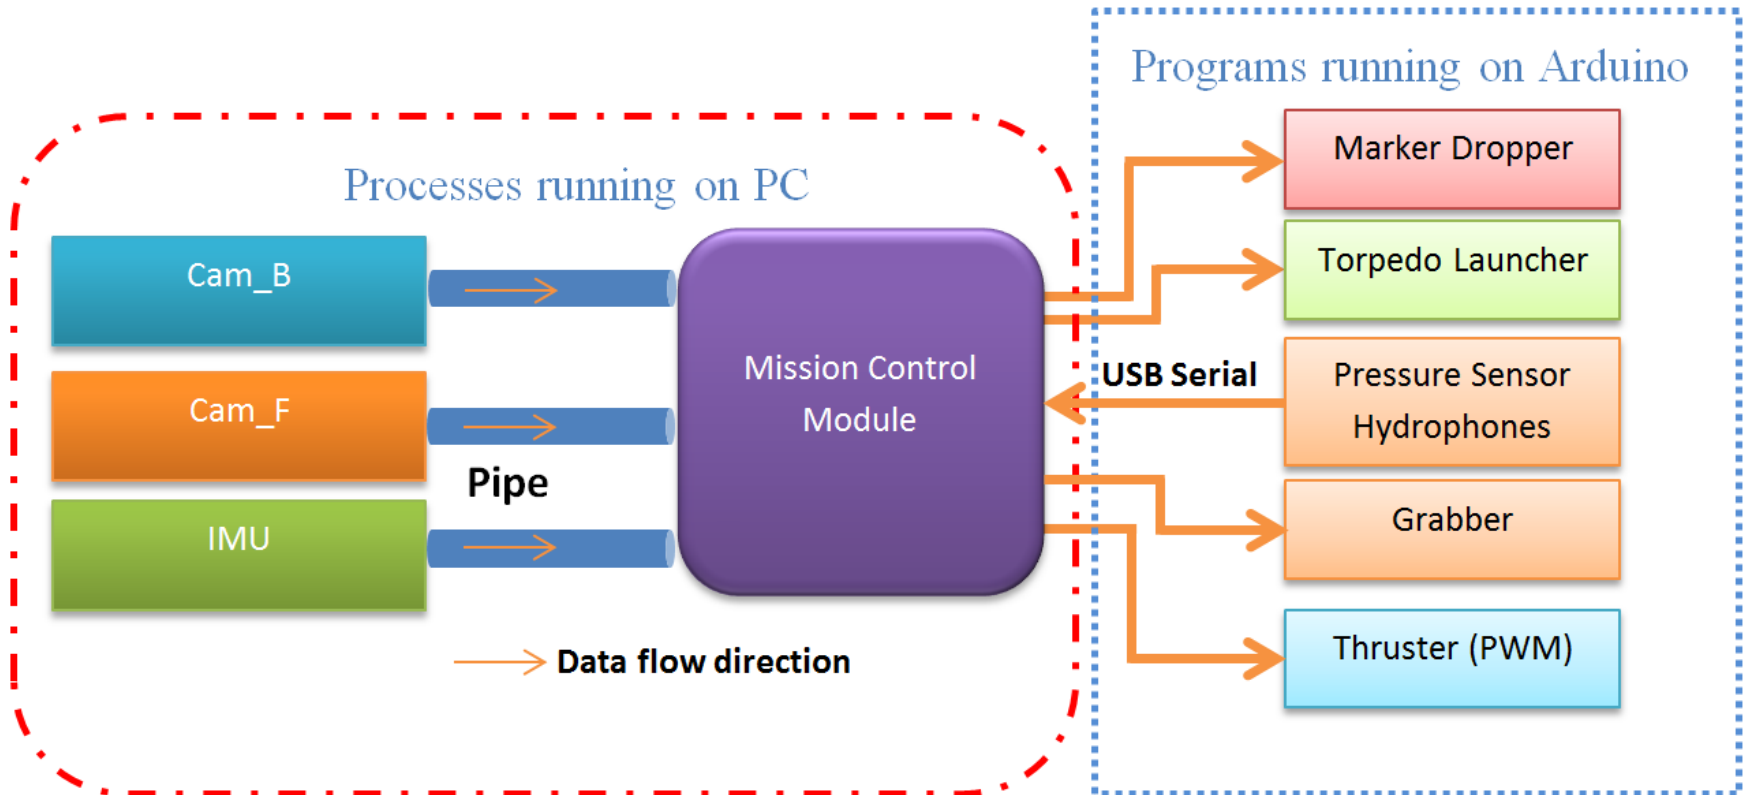

# Electronics Platform

---

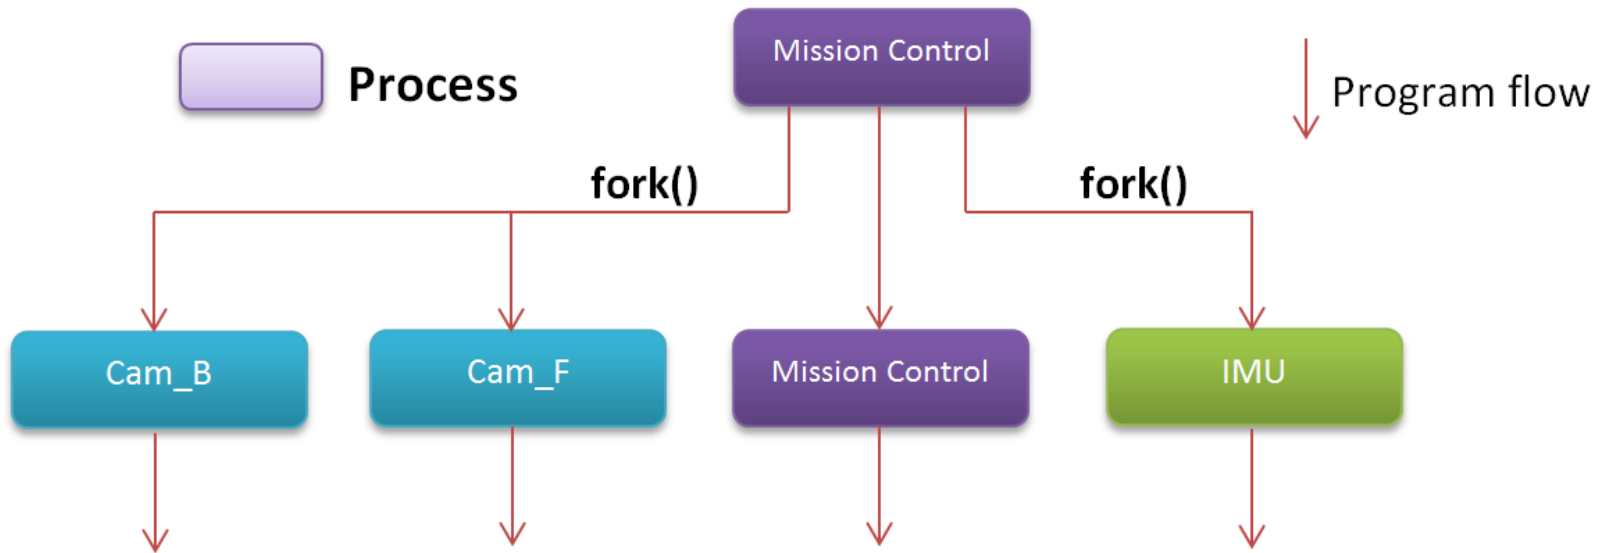

# Mission Control

# Mission Control

---

# Guidance System – IMCL Submersible Pressure Transducer

---

## Key Features:

- Sealed Gauge
- 0 – 10 mWG Range
- 0 – 5V Output
- Marine Bronze Housing
- PUR Cable
- Ceramic Piezoelectric Sensor

## Function:

- Accurately Measure Depth of the AUV Underwater

# Guidance System – Inertial Measurement Unit (IMU)

## Key Features:

- 3-Axis Gyro
- 3-Axis Accelerometer
- Compact 1.2" x 1.4" Footprint
- Micro-USB Input
- Built-In System Clock/Timer

## Function:

- Accurately Measure Orientation, Acceleration, and Relative Position of AUV Underwater

# Guidance System – Inertial Measurement Unit (IMU)

---

## Code Sample

```
SpatialData {  
    double acceleration[3];  
    double angularRate[3];  
    double magneticField[3];  
    Timestamp time;  
};
```

$$\begin{aligned} P_{k-1|k-1} &\rightarrow P_{k|k-1} \\ P_{k|k-1} + y_k &\rightarrow P_{k|k} \\ k &\rightarrow k + 1 \end{aligned}$$

Kalman Filter

# Guidance System – Hydrophone Array

## Key Features:

- Omnidirectional Sensitivity
- Compact Size (1.13" x 1.13" x 1.2")
- High Impedance Cable Sheathing

SQ26-01 Towed Array Hydrophone

80/20 Inch Solid Aluminum Support Bar

## Function:

- Accurately Measure Orientation, Acceleration, and Relative Position of AUV Underwater

# Guidance System – Computer Vision

---

Logitech C615

Auto-Light  
Auto-Focus

Zotac Zbox ID41 Plus

USB 2.0

Intel Atom D525 1.8GHz Dual-  
Core CPU, 2GB RAM, 250GB HDD,  
512MB NVIDIA ION2 GPU

# Computer Vision Framework

---

## Features

- ▶ Modules can be reused
- ▶ Optimized for performance/ efficiency

## Modules

- ▶ Find FPS
- ▶ Save Images
- ▶ Color Filter
- ▶ Find Task
  - ▶ Find Gate
  - ▶ Find Path
  - ▶ Find Buoy
- ▶ Send To Mission Control

# Computer Vision Framework

---

## Structure

Framework

Specific

Optional

# Computer Vision Framework

---

# Computer Vision Framework

```
FPS = 19.250000  
corners = (253.5, -230.7) (-208.5, -86.5) (-105.8, 240.6) (355.7, 96.4)  
center = (74, 5)  
width = 342.658264, height = 481.503723  
angle = 72.645973
```

```

# Tests

---

Test Description	Outcome	Notes
Color Filter	Pass	N/A
Find FPS	Pass	7- 8 FPS Per Web Camera
Send to Mission Control	Pass	Center Coordinates + Timestamp Sent to Mission Control
Save Image Frames	Pass	N/A
Find Gate	Pass	Center + Corner Coordinates, FPS, Height, Width, Angle Displayed

# Budget – Project Expenditures

	Item Description	Price
<b>Fall Expenditures</b>	80/20 Framing + Fasteners	\$359.88
	Cast Acrylic Hull + Torpedo Cannons	\$340.19
	SeaBotix BTDI50 Thrusters	\$1005.18
	SEACON Underwater Micro Wet-Mate Connectors	\$1191.14
	Raw Materials (Aluminum/Acrylic)	\$974.52
	Miscellaneous	\$883.44
<b>Spring Expenditures</b>	Compressed Air Distribution System	\$443.56
	SQ26-01 Hydrophones (2)	\$410.75
	SEACON Underwater Micro Wet-Mate Connectors	\$183.33
	IMCL Submersible Pressure Transducer	\$401.87
	Zotac PC	\$293.98
	Microcontrollers, Interface Circuits, Motor Drivers	\$578.52
	C615 Logitech Web Cameras	\$108.49
	Miscellaneous	\$733.06
<b>Summary</b>	<b>Build Total</b>	<b>\$7,907.91</b>

# Budget – Competition Expenditures/Summary

---

	Item Description	Price
<b>Competition Expenditures</b>	Travel/Shipping/Lodging Expenditures	\$6,700.00
	Competition Fee	\$500.00
	<b>Project Total</b>	<b>\$15,107.91</b>
<b>Summary</b>	<b>Current Budget</b>	<b>\$11,433.00</b>
	<b>Remaining Balance</b>	<b>-\$3,674.91</b>

# Conclusion

---

- ▶ **Completed Objectives**
  - ▶ **Vehicle Mechanically Complete**
    - ▶ Watertight
    - ▶ Proper Weight, Density, and Balance
    - ▶ Integrated Peripheral Subsystems
  - ▶ **Computer Vision**
    - ▶ Gate Detection
    - ▶ Path Detection
    - ▶ C615 Logitech Web Cameras Installed Inside Enclosures
- ▶ **Current Setbacks**
  - ▶ **Electrical System – Wiring Scheme and Accident Shortage Issues**
    - ▶ Arduino Uno Board Failures
    - ▶ L298 Dual H-Bridge Motor Driver Failures
    - ▶ Switching Voltage Regulator Board Failures

# Conclusion

---

## ▶ Remaining Goals

- ▶ Fix/Replace Malfunctioning Circuitry
- ▶ Obtain Proper Functionality of the Thrusters and Marker Dropper
- ▶ Integrate Inertial Measurement Unit (IMU) and Sealed Gauge Pressure Transducer
- ▶ Establish PID Controllers to Maintain Vehicle Stability
- ▶ Progress/Refine Computer Vision and Mission Control to Enable the Successful AUV Completion of the Gate-Passing, Buoy-Striking, and Torpedo Launching (i.e. “Kill Caesar”) Tasks
