

Entrepreneurial: After-Market Child Detection for Car Seats

Team 35: Troy Brumm, Stephen Carr, Justin Craig, Charlie Cruzan, and Spencer Nguyen

Sponsor: Dr. Michael Devine | Faculty Advisor: Dr. Simone Hruda

Summary

The number of infant fatalities in parked cars due to heat stroke shows no sign of decreasing. 743 children have died due to pediatric vehicular heatstroke since 1998. Our goal was to develop a device that detects when a child is left in a vehicle that is subject to dangerous temperatures, and alert necessary parties.

Targets

- ❖ Detect Temperature
- ❖ 70-120°F
- ❖ Withstand Temperature
- ❖ 0-200°F
- ❖ Detect Child in car seat
- ❖ Determine temperature rate of change
- ❖ Communicate to user
- ❖ Compatibility
 - > 5 top selling car seat brands

Entrepreneurial Aspects

- ❖ Product Name: **Kinderguardian**
- ❖ InNOVation Challenge:
 - Business Model Competition with a focus on identifying problems and potential solutions.
- ❖ COE Shark Tank Competition
 - FAMU-FSU College of Engineering STEM-based business pitch competition
 - Our team will participate in the finals on April 12, 2018
