

FAMU-FSU
College of Engineering
Lecture #8:
AC Network Analysis
(Part II)

EEL 3003
Introduction to Electrical Engineering
Summer Semester, 2013
Instructor: Dr. Michael Frank

6/6/2013 M. Frank, EEL 3003 - Intro. EE, Summer 2013 1

FAMU-FSU College of Engineering

Administrative Announcements

- Outline of Today's Class Session:
 1. Review Quiz #2 Solutions
 - on Chapter 3, Resistive Network Analysis
 2. Continue Chapter 4, AC Network Analysis
 - §4.2 – Time-dependent Signal Sources
 - §4.3 – Solution of Circuits Containing Energy Storage Elements (Dynamic Circuits)
 - §4.4 – Phasor Solution of Circuits with Sinusoidal Excitation
 - §4.5 – AC Circuit Analysis Methods
- Re: Current Homework Assignment (#3):
 - Read Ch. 4 & practice w. these exercises:
 - 4.1*, 4.12*, 4.31, 4.59*, 4.66, 4.68, 4.71, 4.77*
 - Quiz postponed to next Thursday (June 13th).

6/6/2013 M. Frank, EEL 3003 - Intro. EE, Summer 2013 2

FAMU-FSU College of Engineering

1. Review Quiz #2 Solutions (Ch. 3, Resistive Network Analysis)

- Quiz grades are improving (vs. 1st quiz)
 - Grade histogram (papers graded so far)
 - A – #####
 - B – ###
 - C – ##
 - D –
 - F – ##
- Go through quiz solutions document

6/6/2013
M. Frank, EEL 3003 - Intro. EE, Summer 2013
3

FAMU-FSU College of Engineering

§4.2 - Time-dependent Signal Sources

- Types of time-dependent sources:

General
time-dependent
voltage source

General
time-dependent
current source

Sinusoidal
voltage or
current source

6/6/2013
M. Frank, EEL 3003 - Intro. EE, Summer 2013
4

FAMU-FSU College of Engineering

Periodic Signals

□ Some common types: $[x(t) = v(t) \text{ or } i(t)]$

Sawtooth

Square

Triangle

Pulse Train

Sinusoidal

6/6/2013

5

FAMU-FSU College of Engineering

Sinusoidal Signal Waveforms

□ General form for a sinusoidal voltage waveform:

$$v(t) = V \cdot \sin(\omega t + \phi)$$

■ Where:

- t = time
- $\omega = 2\pi(\text{rad}) \cdot f$ is angular frequency
 - Angular amount of "rotation" per unit time
- $f = 1/T$ = cycle frequency
 - often in cyc/sec (Hz = hertz)
- ϕ = phase offset (angular units)
- V (or A) = voltage amplitude

$2\pi \text{ rad} = 1 \text{ cyc} = 360^\circ$

T = period

Δt = time offset

$\phi = 2\pi \frac{\Delta t}{T} \text{ rad}$

M. Frank, EEL 3003 - Intro. EE, Summer 2013
6

FAMU-FSU College of Engineering

RMS Voltage/Current

- A measure of “average” signal strength:

$$x_{\text{rms}} = \sqrt{\frac{1}{T} \int_{t=0}^T x^2(t) dt}$$
 - rms = “root-mean-square”
 - x here could be either i or v
- Can easily calculate average signal power given RMS signal value:
 - E.g., $P_{\text{av}} = I_{\text{rms}}^2 \cdot R$

6/6/2013 M. Frank, EEL 3003 - Intro. EE, Summer 2013 8

FAMU-FSU College of Engineering

RMS Value of a Sinusoidal Signal

- **Exercise:** Use your knowledge of calculus to prove that for any sinusoidal signal $x(t)$, over any integer number of cycles,

$$x_{\text{rms}} = \frac{1}{\sqrt{2}} X,$$

- where X is the signal amplitude.

6/6/2013 M. Frank, EEL 3003 - Intro. EE, Summer 2013 9

FAMU-FSU College of Engineering

§4.3 – Solution of Circuits Containing Energy Storage Elements (Dynamic Circuits)

- This part of lecture was done on whiteboard
 - See notes posted after the lecture

6/6/2013 M. Frank, EEL 3003 - Intro. EE, Summer 2013 10
